

Partnering for

ACCELERATED BREACH RESPONSE

Best-in-class tools and solutions from Experian® Data Breach Resolution and Co3 Systems work in tandem to reduce your risk and improve your response time.

Everything from your customer loyalty to your public reputation is on the line when data loss occurs, and everything – absolutely everything – rides on your breach preparedness and response. With best-in-class tools and solutions from recognized breach response leaders, you can weather the storm. Co3 Systems and Experian Data Breach Resolution can help.

Automated Incident Response Plans from Co3 Systems

Effective incident response is built upon four pillars: prepare, assess, manage and report. Co3 Systems automates these critical procedures for security incidents of all types, including malware outbreaks, system intrusions, DDoS attacks and privacy breaches.

Co3 incident response plans are built on best practices, industry standard frameworks and regulatory requirements to ensure efficiency and compliance. Plans are specific to incident type and the appropriate regulations. Plus, customization easily allows for company-specific practices and contractual requirements.

For incidents that involve personally identifiable information, an innovative privacy module invokes the appropriate state, federal, regional and trade privacy breach regulations, such as HIPAA/HITECH and state/territory disclosure laws. These capabilities align with Experian Data Breach Resolution for best-in-class incident response that takes organizations from investigation to notification.

Co3 makes it easy for firms to prepare, assess, manage and report breaches with automated incident response. Our incident response plans ensure effectiveness, accuracy, consistency and compliance while reducing expense and risk.
